Federal Milk Order Market Statistics

2000 Annual Summary

PREFACE

Federal milk marketing orders are established under the authority of the Agricultural Marketing Agreement Act of 1937, as amended. The Secretary of Agriculture is authorized by this statute, under certain conditions and with producer approval, to issue milk marketing orders that require handlers to pay at least the minimum specified prices for milk purchased from producers. The complete orders are published in the U. S. Code of Federal Regulations, Parts 1000 to 1199.

This is an annual summary of monthly Federal milk order statistical data. These data have been compiled from reports that handlers (milk processors) are required to file monthly with the market administrator who administers the respective Federal milk order. These reports show the volume of milk receipts from each source and quantity of milk used in each form. From these reports, data are compiled and totaled for each order by the market administrator. The order summary report is submitted to the Market Information Branch in Dairy Programs and is combined with the summary reports for the other orders.

The data in this summary is for 2000. Similar data for the period from 1947 through 1999 have been published in 43 previous annual summaries.

Issued February 2002

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact the USDA's TARGET center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building 14th and Independence Avenue SW., Washington, DC, 20250-9410, or call (202) 720-5964 (voice and TDD). USDA is an equal opportunity provider and employer.

HOW FEDERAL MILK ORDER STATISTICS ARE DEVELOPED

Introduction.

The statistical data generated through the administration of the Federal milk order program is recognized widely as one of the benefits of this program. These data provide comprehensive and accurate information on milk supplies, utilization, and sales, as well as class prices established under the orders and prices paid to dairy farmers (producers). The sources of this data are monthly reports that are required to be filed by milk processors (handlers) subject to the provisions of the various milk orders. The local market administrator uses these reports to administer the provisions of the order and to assemble a series of statistical reports that summarize individual handler operations for the order, which are submitted to the Market Information Branch in Dairy Programs in the Agricultural Marketing Service.

Why Are Figures Collected?

Each month, regulated handlers (fluid milk processors subject to the provisions of a Federal milk order) are required to file a report of milk receipts and utilization (R & U Report) with the order's market administrator (MA). The MA is the Federal official in each market who, with the assistance of a staff, administers the terms of the Federal order. The R & U report shows, for the month, the quantities of milk and milk products received at the handler's plant from each source, either directly from farms or from other plants, and how this milk was used in the plant. All major fluid milk products and manufactured milk products are listed on the report form, and handlers are required to specify the volume and butterfat content, and in some cases, other milk components, of all milk used in each product. On the basis of these reports, the MA determines the amount of milk that handlers use in each price class, makes computations of each handler's pool obligation, and calculates the minimum price the handler must pay producers. The MA also receives producer payroll reports from regulated handlers which are used to verify proper payments to producers and reports from nonpool handlers which are used to determine regulatory status.

Are Reported Figures Verified?

The local market administrator maintains a staff of highly-trained auditors who, on a monthly basis, review at each handler's location, the books and records of plant operations for a previous time period. The auditors examine these records to determine whether the milk actually was received and used as reported, and therefore, whether the handler's pool obligation was computed correctly. Reporting errors are corrected; if necessary, pool obligations are revised. Auditors also determine whether required payments were made to producers. As a result, all data reported by handlers is subject to audit.

How Are Summary Statistics Developed?

After the handler pool obligations have been determined, the local market administrator generates a series of reports that compile order totals from the individual handler reports and submits these to the Market Information Branch (MIB) in the Dairy Programs headquarters office. The MIB compiles program-wide totals from the individual order reports and disseminates this information in a series of monthly and annual releases on the Internet, in the weekly "Dairy Market News Report," and in its own publications. Since milk marketing order statistics are based on reports filed by the population of possible reporting firms and not a sample, these statistics are comprehensive. Also, since the individual firm reports are subject to audit and verification, these statistics are accurate and reliable. Federal milk orders use terms that are specifically defined in order provisions. It is recommended that users of Federal milk order statistics become familiar with these terms, some of which are described beginning on page 6 of this publication.

BRIEF DESCRIPTION OF FEDERAL MILK ORDER TERMS

Following is a brief description of some terms used in Federal milk order statistics. For a detailed description of Federal milk order terms, see the specific order provisions in the Code of Federal Regulations.

Federal Milk Marketing Order.

A Federal milk marketing order is a regulation issued by the Secretary of Agriculture. Its purpose is to stabilize markets by placing certain requirements on the handling of milk in the area it covers. It is established under the authority of the Agricultural Marketing Agreement Act of 1937, as amended. It requires milk handlers in a marketing area to pay not less than certain minimum class prices established according to how the milk is utilized. These prices are established under the order after a public hearing at which evidence is received on the supply and demand conditions for milk in the market. A milk order, including the pricing provisions and all other provisions, becomes effective only after approval by dairy farmers. It requires that payments for milk be pooled and paid to individual farmers or cooperative associations of farmers on the basis of a uniform or average price.

Marketing Area.

A marketing area is an area designated in a Federal milk order's provisions within which the handling of milk is regulated by the order. Generally, the size of the marketing area is determined by the sales territory of competing handlers. The recent consolidation of orders also looked at overlapping areas of milk supply, the number of handlers within the area, natural boundaries, cooperative association service areas, common regulatory provisions, and milk utilization in common dairy products.

Producer.

A producer is usually any dairy farmer who sells milk to a pool handler. Producers must produce milk in compliance with Grade A inspection requirements, and their milk must be either received at a pool plant or diverted to a nonpool plant for the account of a pool handler. Producer-handlers are not producers.

Handler.

A handler is a person--an individual, partnership, corporation, association, or other business unit, that is subject to the provisions of an order. A handler can be an operator of a plant that is approved by a duly constituted regulatory agency for the handling of Grade A milk. A handler also can be a milk distributor or a broker. A cooperative association that does not operate a plant can be a handler.

Pool Handler.

A pool handler is a handler that is subject in full to the provisions of the order. A pool handler can be an operator of a plant that meets the minimum performance standards included in each order, a pool plant. Such plants include distributing plants, plants primarily engaged in processing packaged fluid milk products, and supply plants, plants primarily engaged in producing manufactured dairy products. A cooperative association that does not operate a plant can be a pool handler. A milk distributor or broker cannot be a pool handler.

Nonpool Handler.

A nonpool handler is an operator of a plant that, while it receives, processes, or distributes milk in the

marketing area, does not meet the minimum performance standards of the order, a nonpool plant. Nonpool plants include: a plant fully regulated under another Federal order; a producer-handler plant, generally a person that operates both a dairy farm and a distributing plant; a partially regulated distributing plant; an unregulated supply plant; or, an exempt plant, a plant operated by a governmental agency or a duly accredited college or university, for charitable purposes, or from which less than 150,000 pounds per month are distributed. Some nonpool handlers file monthly reports with the local market administrator that basically are used to determine regulatory status, but also provide some market statistics.

Receipts of Milk.

Federal milk order statistics include volumes of milk received by handlers regulated under each of the Federal orders. Receipts of milk principally come from producers, but also may include other sources. The volume of milk that is reported as received by handlers from producers includes all such milk regardless of where it may be sold. Milk identified as that received from producers for a given market may come directly from nearby producers or from producers associated with a supply plant which, although located several hundred miles from the marketing area, is pooled on the market. Producer milk also may include milk that is diverted by a pool plant operator to another pool plant or to a nonpool plant. Other source receipts can include milk and dairy products transferred or diverted from plants regulated under other Federal orders or received from unregulated sources such as unregulated supply plants or producer-handlers.

Classes of Milk.

There are four classes of milk utilization defined in Federal orders. Class I use is milk disposed as a fluid milk product, milk products intended to be used as a beverage. Class I uses include plain and flavored whole milk, fat reduced milks, and eggnog. Class II use includes milk used to produce fluid cream and other cream products, cottage cheese, frozen desserts, and other food products. Class III use includes milk used to produce hard cheeses and cream cheese. Class IV includes milk used to produce butter and any milk product in dried form.

Pricing System.

The Federal milk order program uses product price formulas to determine milk component values which are combined to calculate monthly class prices. See page 44 for the applicable class price formulas. The factors in the formulas are dairy product prices, which change monthly, and make allowances and product yields, which are set in the formulas. The dairy product prices are those collected weekly by the National Agricultural Statistics Service in USDA. The most recent four or five weeks of prices are weighted by the applicable weekly volumes to determine a monthly average. Butter, Cheddar cheese and dry whey prices are used to compute values for butterfat, protein, and other solids, respectively. The protein and other solids prices are used to calculate the Class III skim milk price which, combined with the butterfat price, determines the Class III milk price. Butter and nonfat dry milk prices are used to compute values for butterfat and nonfat solids, respectively. The nonfat solids price is used to calculate the Class IV skim milk price which, combined with the butterfat price, determines the Class IV milk price. The Class II price is determined by the Class II skim milk price, which is computed in advance (see Class I price description below), and the Class II butterfat price, the butterfat price plus \$0.007. The Class II, III, and IV prices are the same in each Federal milk order and are announced by the 5th of the following month.

Class I prices vary across the Federal milk order system and are announced in advance by the 23rd of the preceding month. The Class I skim milk price is the higher of the advanced Class III or IV skim milk pricing factors plus a differential specific to each pricing point in the country. The Class I butterfat price is the advanced butterfat pricing factor plus the specific Class I differential divided by 100. The

advanced skim milk pricing factors use the same product price formulas as the Class III and IV prices except that the product prices are for the most recent two weeks. The Class II skim milk price is the Class IV advanced skim milk pricing factor plus a differential of \$0.70 and also is announced by the 23rd of the preceding month.

Producer Prices.

The Federal milk order program has two systems for paying producers, the component pricing system and the skim milk/butterfat pricing system. In the component pricing system, which is used in seven orders, producer prices are based on the value of components, butterfat, protein, and other solids, in the milk they market and the value of the producer price differential. The component values are those computed for the Class III price. The producer price differential, basically, is the weighted average value of the effective Class I and II differentials; the weights being the proportional volumes of milk used in Class I and II. Producers receive a price for each pound of milk component marketed and the producer price differential for each hundredweight of milk marketed. In four of the seven orders, producer prices are adjusted for milk quality as measured by the somatic cell count of the milk. For informational purposes, a statistical uniform price is calculated which equals the Class III price plus the producer price differential.

In the skim milk/butterfat pricing system, which is used in four orders, producer prices are based on the uniform skim milk price and the uniform butterfat price. The uniform skim milk and butterfat prices are the weighted average values of each class's skim milk and butterfat prices. The weights are the volumes of skim milk and butterfat used in each class. Producers receive the uniform skim milk price for each hundredweight of skim milk marketed and the uniform butterfat price for each pound of butterfat marketed. The uniform milk price under this pricing system is the weighted average value of the uniform skim milk and butterfat prices in 3.5% butterfat content milk.

Sales of Fluid Milk Products.

In Federal milk order market statistics, an important distinction is made between sales of packaged fluid milk products in a marketing area (in-area) and packaged disposition of Class I products by handlers regulated in a market. The latter are total dispositions under an order by fully regulated handlers only. Dispositions can occur both inside and outside the defined marketing area of that order and can include both route sales and transfers to nonpool or unregulated handlers. A route sale is a delivery to a retail or wholesale outlet (except a plant), either directly or through a distribution facility. A transfer is a sale (delivery) to another plant. Besides receipts from producers, these dispositions also may include receipts from other Federal order plants and/or receipts from other sources.

In-area sales includes route sales in each of the marketing areas from all sources; handlers regulated under the respective order, handlers regulated under other Federal orders, partially regulated handlers, exempt handlers, and producer-handlers. These data are useful in appraising trends in the sales of fluid milk products and in the per capita consumption of fluid milk products in the Federal order marketing area.

Table 1—Federal Milk Orders in Effect on December 31, 2000, with Number Assigned Each Order in the Code of Federal Regulations and Date on Which Each Order Became Effective

Federal Milk Order	CFR-Chapter 7 Part Number	Date Effective
Appalachian..... Merger of: Carolina -- 9-1-1990, and Louisville-Lexington- Evansville, minus 1 Kentucky county -- 3-1-1962; and, Addition of: former Tennessee Valley marketing area, 3 unregulated counties in Indiana, and 18 unregulated counties in Kentucky.	1005	1-1-2000
Arizona-Las Vegas..... Central Arizona --12-1-1955; and, Addition of: 1 Nevada county from Great Basin and 8 unregulated counties in Arizona.	1131	1-1-2000

1/ End of year. The number of markets peaked at 83 in 1962. The number of handlers peaked at 2,314 in 1961.

2/ Average for year. The number of producers peaked at 192,947 in 1961.

3/ Beginning in 1989, due to disadvantageous price situations in some markets, handlers elected not to pool milk that normally would have been associated with the order. This has reduced, sometimes substantially, the volume of producer milk receipts reported for some markets.

4/ Based on blend (uniform) price adjusted for the butterfat content, and in later years, other milk components of producer milk.

1/ These figures are the population in the counties, parishes, independent cities, and local subdivisions of the States listed that make up the marketing area. The source of these figures is the 2000 Population Census conducted by the Bureau of the Census, U.S. Department of Commerce.

FEDERAL MILK MARKETING ORDER AREAS

January 1, 2000

USDA
Agricultural Marketing Service
Dairy Programs

DIFFERENCES IN SHADING MERELY SERVE TO
DIFFERENTIATE BETWEEN MARKETING AREAS

SUMMARY OF MAJOR ORDER ACTIONS DURING 2000

JANUARY

New England and Other Marketing Areas – January 1 (64 FR 70868, 12/17/99.) This document modifies and announces the effective date for the final rule published in the Federal Register on September 1, 1999. The Consolidated Appropriations Act, 2000, (P.L. 106-113, 115 Stat. 1501), signed into law on November 29, 1999, requires that the final rule published in the **Federal Register** on September 1, 1999 (64 FR 47898) consolidating the current 31 Federal milk marketing orders into 11 orders become effective on January 1, 2000, utilizing the Class I differentials contained in the proposed rule published on January 30, 1998 (63 FR 4802) as corrected and modified through April 2, 1999. A document issued on September 30, 1999, and published in the **Federal Register** on October 5, 1999 (64 FR 53885) delayed until further notice the October 1, 1999, effective date for consolidating the orders because of a temporary restraining order, issued by the U.S. District Court for the District of Vermont, which enjoined the Secretary of Agriculture from implementing the amendments consolidating the orders.

This document was further corrected at 64 FR 73386, 12/30/99.

This amendment principally deals with the following components of the Federal milk marketing order program: marketing areas, class prices, classification, and identical provisions.

Marketing Areas – The 31 Federal milk marketing order areas are consolidated into 11 areas. These are Northeast, Appalachian, Florida, Southeast, Mideast, Upper Midwest, Central, Southwest, Arizona-Las Vegas, Western, and Pacific Northwest. See Table 1 on page 9 for a description of these areas.

Class Prices – The Basic Formula Price is replaced. Product price formulas are used now to determine milk component values which are combined to calculate class prices. A new Class I pricing structure is adopted under which a Class I differential is established for every county in the contiguous 48 States. The Class I price for a county is the same regardless as to the order under which the milk is priced. Class I prices are announced in advance by the 23rd of the preceding month. The Class II price, basically, is the Class IV price plus \$0.70. The Class III price is based on the component values for butterfat, protein, and other solids. The Class IV price is based on the component values for butterfat and nonfat solids. See page 7 for additional information on the new pricing system.

Classification – All orders now have four classes of milk utilization. Class I use is milk disposed as a fluid milk product--a beverage. Class I now includes eggnog. Class II use includes milk used to produce fluid cream and other cream products, cottage cheese, frozen desserts, and other food products. Class III use includes milk used to produce hard cheeses and cream cheese. Class IV use includes milk used to produce butter and any milk product in dried form.

Identical Provisions – The individual provisions of each order are streamlined to remove those provisions, terms, and definitions that are identical across orders and placing these in an identical provisions section that is referenced, as applicable, in each order.

SUMMARY OF THE QUANTITIES AND UTILIZATION OF MILK PRICED

During 2000, there were 346 handlers regulated under the 11 Federal milk orders. These handlers operated 298 distributing (fluid milk processing) plants and 110 supply (manufacturing) plants. The Upper Midwest order had the largest number of regulated handlers (58) and supply plants (60). The Northeast order had the most distributing plants (62).

An average of 69,590 producers (dairy farmers) marketed milk under Federal milk orders in 2000. On a monthly basis, the number of producers peaked at 71,741 in March, and was lowest in December (67,308). There was an average of 19,147 producers on the Upper Midwest order, 17,279 producers in the Northeast order, and only 122 producers on the Arizona-Las Vegas order.

During 2000, nearly 117 billion pounds of milk was marketed by dairy farmers under the Federal milk order program. This volume of milk accounted for about 70 percent of all the milk marketed in the United States and about 72 percent of the fluid grade (Grade A) milk marketings. The average butterfat test of producer milk receipts was 3.69 percent, and ranged from 3.56 percent in July to 3.82 percent in December. On a monthly basis, producer milk receipts peaked in March at 10.5 billion pounds, and was lowest in November (9.2 billion pounds). Nearly 24 billion pounds of milk were marketed under the Northeast order, just 2.9 billion pounds under the Florida order. The average delivery of milk per producer during 2000 was 4,590 pounds, and ranged from 3,338 pounds in the Upper Midwest order to 69,762 pounds in the Arizona-Las Vegas order.

Nearly 46 billion pounds of producer milk receipts were disposed as Class I (fluid milk) products in 2000, 39.3 percent of total producer milk marketings. The butterfat content of producer milk used in Class I averaged 2.02 percent. On a monthly basis, the volume of Class I producer milk peaked in March at 4.0 billion pounds, and was the lowest in July (3.5 billion pounds). Relative to total producer milk marketings, Class I utilization peaked in September. The order with the largest volume of Class I producer milk was Northeast (10.5 billion pounds), over 56 percent more than the next largest volume (Mideast). On an individual order basis, the average Class I utilization percentage in 2000 ranged from 88.1 in the Florida order to 17.5 in the Upper Midwest order.

Slightly more than 10 percent (12 billion pounds) of total producer milk marketings were used to produce Class II products (cream products, cottage cheese, and frozen desserts) in 2000. The butterfat test of producer milk used in Class II averaged 7.81 percent. The Northeast order had the largest volume of Class II producer milk (4.2 billion pounds). Class III products (hard cheeses and cream cheese) accounted for nearly 50 billion pounds of producer milk, 42.7 percent of total producer milk marketings. The butterfat test of producer milk used in Class III averaged 3.74 percent. The Upper Midwest order had the largest volume of Class III producer milk (18.3 billion pounds). Slightly more than 9 billion pounds of producer milk were used to produce Class IV products (butter and dried milk products). The butterfat test of producer milk used in Class IV averaged 7.75 percent. The Northeast order had the largest volume of Class IV producer milk (2.3 billion pounds).

An estimated 3.6 billion pounds of producer milk that normally would have been marketed under Federal orders in 2000 was not pooled due to the relationship between the uniform and lower class prices in some orders in some months. Not pooling due to price occurred in six orders; Central, Mideast, Pacific Northwest, Southwest, Western, and Upper Midwest. Nearly 63 percent of not-pooled producer milk would have been used to produce Class IV products, and 36 percent would have been used to produce Class II products.

Table 4--Number of Pool Handlers, Supply Plants, and Distributing Plants Under
Federal Milk Orders, by Order, December 2000

Federal Milk Order Marketing Area	Order Number	Pool Handlers 1/	Supply Plants 2/	Distributing Plants 3/

^{1/} It should be noted that the election not to pool milk normally associated with an order due to disadvantageous intraorder price relationships affects the comparability of this statistic. See footnotes on Table 6.

^{2/} Figures are computed from the "All Markets Combined" data for number of producers and receipts of producer milk from Tables 5 and 6.

^{1/} It should be noted that the election not to pool milk normally associated with an order due to a disadvantageous price relationship affects the comparability of this statistic. See footnotes on Table 17. Figures shown for All Markets Combined and AVERAGE are computed from the applicable annual or monthly totals of producer milk used in Class II and total producer milk.

^{1/} Figures are shown for those orders for which the information is available; that is, the orders with the component pricing system for paying producers. Figures shown for All Markets Combined and AVERAGE are computed from the applicable annual or monthly totals of nonfat solids and producer milk pounds used in Class IV.

SUMMARY OF CLASS AND PRODUCER PRICES AND GROSS VALUES

In January 2000, a new class pricing system was implemented under the Federal milk order program. The Basic Formula Price was replaced by product price formulas that determine milk component values that are combined to calculate class prices. The product prices are those collected by the National Agricultural Statistics Service. A new Class I price surface was introduced.

During 2000, the base skim milk price for Class I averaged \$7.72 per cwt., and was the advanced Class IV skim milk pricing factor in every month. This price showed little month-to-month variation during the year. The advanced butterfat pricing factor averaged \$1.1730 per pound, and ranged from \$0.9302 in February to \$1.4355 in July. The Class I base price, equivalent to the Class I mover under the old pricing system, averaged \$11.55 per cwt., ranging from \$10.71 in February to \$12.46 in July. For all markets combined, the Class I price averaged \$14.24 per cwt. in 2000, ranging from \$13.40 in February to \$15.15 in July. On an individual order basis, the annual average Class I price ranged from \$13.34 in the Upper Midwest order to \$15.53 in the Florida order.

The Class II price averaged \$12.53 per cwt. in 2000, peaking at \$13.97 in December, hitting the low point of \$11.43 in January. The Class II, III, or IV prices do not vary from order to order. The Class III price averaged \$9.74 per cwt. in 2000, ranging from \$8.57 in November to \$10.76 in September. The Class IV price averaged \$11.83, ranging from \$10.73 in January to \$13.27 in December.

During 2000, the uniform milk price, a statistical measure of the minimum price received by dairy farmers marketing milk under the Federal order program, averaged \$12.11 per cwt. This price peaked in July at \$12.71 and hit its low point in February at \$11.48. On an individual order basis, the uniform milk price ranged from \$10.55 in the Upper Midwest order to \$15.22 in the Florida order. For those producers paid under the component pricing system, those marketing milk under orders 1, 30, 32, 33, 124, 126, and 135, the annual average values of their milk payment components were: producer price differential, \$2.05 per cwt.; butterfat, \$1.2522 per pound; true protein, \$1.6938 per pound; and other solids, \$0.0509 per pound. For those producers subject to the somatic cell adjustment to their milk payment, the rate averaged \$0.00057. For those producers under the skim milk/butterfat pricing system, those marketing milk under orders 5, 6, 7, and 131, the uniform skim milk price averaged \$9.70 per cwt. in 2000, and the uniform butterfat price averaged \$1.2319 per pound.

The gross value of producer milk receipts under the Federal order program in 2000 was \$14.5 billion, about 70 percent of the cash receipts from all milk marketings in the country. This figure was computed for each order using the applicable minimum component prices adjusted to the actual component tests of producer milk receipts. On an individual order basis, the gross value of producer milk receipts was the highest in the Northeast order, followed next by the Upper Midwest order. Per producer, the gross value of producer milk receipts averaged \$207,913. Producers in the Arizona-Las Vegas order had a gross value of slightly more than \$3 million each, more than twice as much as the next largest per producer gross value in the Florida order. On the other end of the scale, producers in the Upper Midwest order had a gross value of \$132,713 each.

FEDERAL MILK ORDER PRICE FORMULAS FOR 2000

Note: Milk prices are per 100 pounds or cwt., rounded to the nearest cent.
Component prices are per pound, rounded to the nearest one-hundredth cent.
Cheese, dry whey, butter, and nonfat dry milk prices are weighted averages of weekly NASS survey prices.

Class I:

Class I Price = (Class I skim milk price x 0.965) + (Class I butterfat price x 3.5).
Class I Skim Milk Price = Higher of advanced Class III or IV skim milk pricing factors
+ applicable Class I differential.
Class I Butterfat Price = Advanced butterfat pricing factor + (applicable Class I
differential divided by 100).

Note: Advanced pricing factors are computed using applicable price formulas listed below, except that
product price averages are for two weeks.

Class II:

Class II Price = (Class II skim milk price x 0.965) + (Class II butterfat price x 3.5).
Class II Skim Milk Price = Advanced Class IV skim milk pricing factor + \$0.70.
Class II Butterfat Price = Butterfat price + \$0.007.
Class II Nonfat Solids Price = Class II skim milk price divided by 9.

Class III:

Class III Price = (Class III skim milk price x 0.965) + (Butterfat price x 3.5).
Class III Skim Milk Price = (Protein price x 3.1) + (Other solids price x 5.9).
Protein Price = ((Cheese price - 0.1702) x 1.405) + (((Cheese price - 0.1702)
x 1.582) - Butterfat price) x 1.28).
Other Solids Price = (Dry whey price - 0.137) divided by 0.968.
Butterfat Price = (Butter price - 0.114) divided by 0.82.

Class IV:

Class IV Price = (Class IV skim milk price x 0.965) + (Butterfat price x 3.5).
Class IV Skim Milk Price = Nonfat solids price x 9.
Nonfat Solids Price = (Nonfat dry milk price - 0.137) divided by 1.02.
Butterfat Price = See Class III.

Producer Prices:

Butterfat Price = See Class III.
Protein Price = See Class III.
Others Solids Price = See Class III.
Somatic Cell Adjustment Rate = Cheese price x 0.0005, rounded to fifth
decimal place. Rate is per 1,000 somatic cell count difference from 350,000.

1/ This price is shown for informational purposes only; it is not defined in Section 1000.50 of the order. This price is equivalent to the Class I mover function of the Basic Formula Price under the former pricing system. It equals (the base skim milk price for Class I times 0.965) plus (the advanced butterfat pricing factor times 3.5).

2/ The higher of the advanced Class III or IV skim milk pricing factors. The Class I skim milk price equals this price plus the applicable Class I differential.

3/ The Class I butterfat price equals this price plus the (applicable Class I differential divided by 100).

1/ For those orders that use the component pricing system for paying producers (orders 1, 30, 32, 33, 124, 126, and 135), the figures are the statistical uniform price (the sum of the producer price differential and the Class III price). For those orders that use the skim milk/butterfat pricing system for paying producers (orders 5, 6, 7, and 131), the figures are the uniform price (the sum of the uniform butterfat price times 3.5 and the uniform skim milk price times 0.965). Figures are shown at 3.5 percent butterfat; see Table 33 for principal pricing points of markets. All averages are weighted using the applicable pounds of total producer milk receipts.

All Markets Combined		12.37	14,468,892	207,913

1/ For component pricing orders (orders 1, 30, 32, 33, 124, 126, and 135), the sum of the value of producer milk components and the value of the producer price differential. For skim/butterfat pricing orders (orders 5, 6, 7, and 131), the product of producer milk receipts in hundredweights (cwts.), and the uniform price at test.

2/ For component pricing orders (see 1/), equals the Class III price adjusted to the applicable component tests of producer milk receipts plus the producer price differential.. For skim/buttermilk pricing orders (see 1/), equals the sum of the uniform skim milk price times (1 minus the butterfat test of producer milk receipts) plus the uniform butterfat price times (the butterfat test of producer milk receipts times 100).

SUMMARY OF FLUID MILK PRODUCT SALES

Two different data series of fluid milk product sales are shown in this section. The first data series presents the volume of packaged fluid milk products produced by handlers regulated under the specific Federal milk order listed. This production may be distributed in the marketing area of the Federal order under which the handler is regulated, in the marketing area of another Federal order, or in an area that is outside any Federal milk order marketing area. The second data series shows the volume of packaged fluid milk products sold in a specific order's marketing area. This volume could include handlers regulated under the order whose marketing area is listed, handlers regulated under other Federal orders, and handlers not regulated under any Federal milk order.

Nearly 46 billion pounds of packaged fluid milk products were produced by the handlers regulated under the Federal milk order program in 2000. This volume was nearly 84 percent of all the packaged fluid milk products produced in the United States in that year. The fluid milk product with the largest volume was whole milk, 15.1 billion pounds, followed closely by reduced fat milk (formerly 2% lowfat milk) with 14.6 billion pounds. These two products accounted for nearly 65 percent of the total fluid milk products produced by regulated handlers. The order with the largest volume of packaged fluid milk production was the Northeast, 10.5 billion pounds, nearly 58 percent larger than the next biggest volume, 6.7 billion pounds in the Mideast order.

Slightly more than 45 billion pounds of packaged fluid milk products were sold in all Federal milk order marketing areas in 2000. This volume was slightly more than 82 percent of all the packaged fluid milk products sold in the United States. As a side note, slightly more than 81 percent of the total population in the U.S. resides in Federal milk order marketing areas. The proportion of total in-area sales by source was: handlers regulated under the specific order, 91%; handlers regulated under other Federal orders, 6%; and, handlers not regulated under any Federal milk order, 3%. For all Federal milk order marketing areas combined, more whole milk is sold than any other fluid milk product. Whole milk sales totaled 15.1 billion pounds versus 14.3 billion pounds for reduced fat (2%) milk. However, in six of the eleven individual Federal milk order marketing areas, more reduced fat (2%) milk was sold than whole milk.

For all Federal milk order marketing areas combined, per capita sales of fluid milk products in 2000 was 198 pounds, about 23 gallons. The order with the highest volume of per capita in-area sales was the Western order, 262 pounds, 30.5 gallons. The Southeast order had the smallest per capita sales, 174 pounds, 20.2 gallons. Orders with above-average per capita sales included; Pacific Northwest, Upper Midwest, Mideast, and Central.

1/ Includes sales in each area by handlers regulated under the respective order, by handlers regulated under other orders, by partially regulated handlers, by exempt handlers, and by producer-handlers. (See page 6 for the definitions of these handler types.) Sales routes of some handlers may extend outside defined marketing areas; therefore some in-area sales may be partially estimated.

2/ May include miscellaneous fluid milk products.

3/ Due to reporting problems, this figure does not include the data for all orders. See 4/.

4/ Data for this product was not reported separately.

5/ The in-area sales data for this order does not include all the sales in the marketing area due to the reporting exemption of the fluid milk processor located in Clark County, Nevada.

SUMMARY OF MILK USED TO PRODUCE MANUFACTURED DAIRY PRODUCTS

The statistics shown in this section differ from those shown in the lower class utilization tables in the Quantities and Utilization of Milk Priced section. In addition to producer milk used in each class, this section includes “other source” milk used to produce lower class products. Other source milk is milk and dairy products received from other order plants or unregulated plants.

During 2000, nearly 71.3 billion pounds of milk, skim milk, and cream that were used to produce Class II, III, and IV products were handled by milk processors regulated under the Federal milk order program. This volume was either processed in their own regulated plants, or transferred or diverted to unregulated nonpool plants for processing. On a whole-milk-equivalent basis, 54.2 percent of this volume was used in Class III products, 28.3 percent in Class II, 17.3 percent in Class IV, and 0.2 percent in other uses (milk and dairy products that were dumped, used for animal feed, or destroyed).

There were 13.2 billion pounds of milk, skim milk, and cream used to produce Class II products in 2000. The butterfat test of this volume was 7.26 percent. On a volume basis the largest Class II volume was used in frozen desserts, 5.2 billion pounds with a 9.27 percent butterfat content, followed by cottage cheese, 3.4 billion pounds with a 1.77 percent butterfat content. On a whole-milk-equivalent basis, frozen desserts would remain the largest use, but both fluid cream products and sour cream products use would have been larger than cottage cheese. On an individual order basis, those orders with larger populations had higher Class II volumes, with the exception of the Southeast order.

Class III production accounted for 48.2 billion pounds of milk, skim milk, and cream which had a butterfat test of 3.81 percent. The largest Class III volume was used in American cheese, 23.2 billion pounds with a 3.84 percent butterfat content, followed by Italian cheese, 14.8 billion pounds with a 3.54 percent butterfat content. The order with the largest volume of Class III production was the Upper Midwest, 17.1 billion pounds, more than 85 percent larger than the next highest order volume, Central with 9.2 billion pounds. These two orders accounted for nearly 55 percent of total Class III production in all Federal milk orders.

There were 9.3 billion pounds of milk, skim milk, and cream used to produce Class IV products in 2000. The butterfat content of this volume was 6.29 percent. The Class IV product with the largest volume was nonfat dry milk; the product with the largest whole-milk-equivalent was butter. The order with the largest volume used to produce Class IV products was the Northeast, 2.4 billion pounds. About 0.6 billion pounds of milk, skim milk, and cream were used in “other uses” in 2000. This use would have been Class III in each month of that year.
